

COMPLIANCE SCREENING

Sanctions List Check for SAP® ECC6 and S/4HANA®

Since February 2022, the issue of sanctions list review has taken on a new, global significance. The world is subject to constant change. Business relationships that are still legal today can be affected by a boycott tomorrow.

Many companies have underestimated the issue and have not defined processes and responsibilities for a sanctions list review. In some cases, not only do business partners have to be audited, but also the controlling parent company and the managing directors.

Various public reports have also shown that companies need to focus more on this issue. The company needs to know, "Is my business partner a politician, or does the company belong to the daughter of a head of government or government official?"

Impact on your business processes

In order to comply with applicable regulations, it is essential to have audit-proof documentation of sanctions list matches.

Marlin Compliance Screening (MCS) is an SAP® add-on for checking persons and companies against sanctions lists of all kinds - whether boycott/embargo, fraud, terrorists or PEP (politically exposed persons) lists. The application is based on the operational SAP process and monitors the creation and maintenance of master and master data for customers and vendors, personnel master data, business partner master data, and company bank master data. In addition, the sanctions list check is also performed on relevant transaction data in sales and purchasing. The check is also performed for manually entered, deviating goods recipients or CPD accounts. Systems not connected to MCS can be checked by uploading CSV files. The results are securely displayed in the Compliance Cockpit, also in SAP.

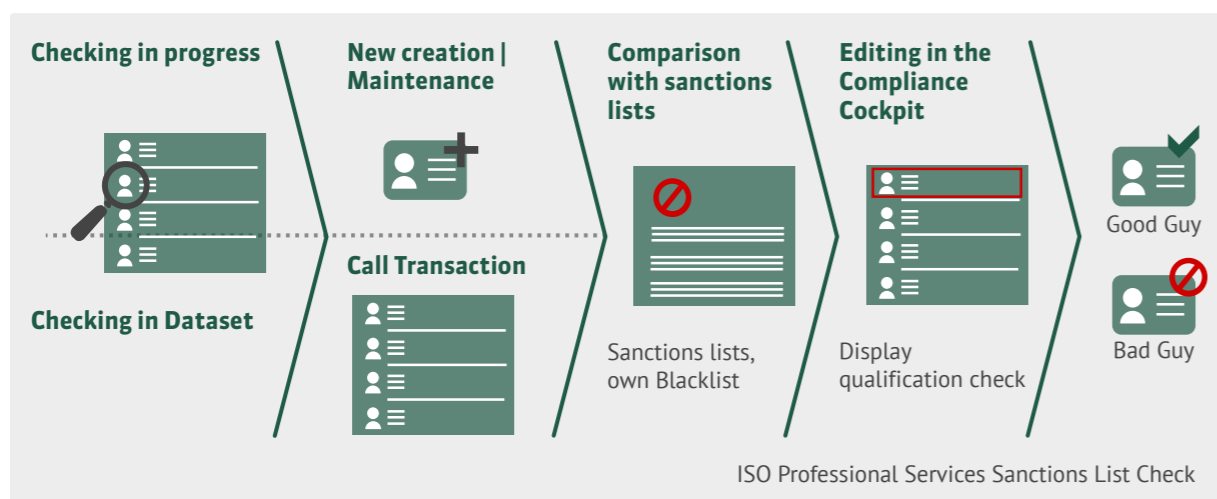

The Integrated Solution for Your SAP® Application

Marlin Compliance Screening (MCS) is an ABAP-programmed solution that integrates with your critical business processes. An intelligent, future-proof screening technology checks business partner data against various providers. ISO provides standardized and structured data through its own data service via a web service connection. Alternatively, sanctions lists from other provi-

ders can be imported. The tool notifies the compliance officer by e-mail of any discrepancies with sanctioned persons or companies. With the help of Compliance Cockpit, they have the option of central processing. The hits are qualified (e.g. as "good guy" or "bad guy") and further processed in a monitor. The compliance officer can use the cockpit to confirm or remove the blocks on the master record. MCS also prevents an employee from removing compliance blocks from a master record or document. MCS documents all steps and records them in a verifiable manner. All necessary settings are made in the product's own SAP customizing.

Cross-regulatory Review

In order for a group to comply with the different legal requirements in different countries, these are mapped using legal areas. The legal area comprises one or more company codes that are subject to the same legal framework. The legal area can be defined differently for the USA, the EU, or China. The company codes, lists to be checked, responsible employees, objects (customer, vendor, bank, SD document, and so forth), and the blocks that apply to the object are assigned to the legal area.

FUNCTIONS

- Customer, vendor, contact person for customer and vendor, business partner, bank master record, HR master record
- Individual check
- Dialog check during creation and modification
- Full and delta validation
- CSV file validation of external data
- Import of ISO sanctions lists via web service
- Standard interface for PEP and fraud lists
- Check definition via intelligent jurisdictions
- Country embargoes
- Language independent high performance screening technology
- Definition of automated blocks for master and transaction data
- Central monitor for displaying, qualifying and processing sanctions list hits
- Creation of compliance files (forwarding possible)
- Web service connection or import of lists from Reguvis, Sanktionslisten.de, intelliCompliance
- Interface for import of additional sanction lists

office, who the parent company is and, if applicable, which directors are registered. MCS then checks the master record as well as the parent company and directors.

Embargo, PEP and Fraud Lists

In addition to embargo (sanctions) lists, MCS can also import PEP and fraud lists. The process for PEP lists with the responsible employees and the approval process is defined in another legal area. The same can be done for fraud or counterfeit lists.

External systems like CRM or SRM

It is possible to connect other systems to the MCS via a web service. The interface transfers the data to be checked and MCS generates the documents in the SAP system. An external SRM system can be assigned to a different compliance officer via the legal areas. The tool displays the documents in its cockpit for processing. Alternatively, the user can check the data via a CSV upload.

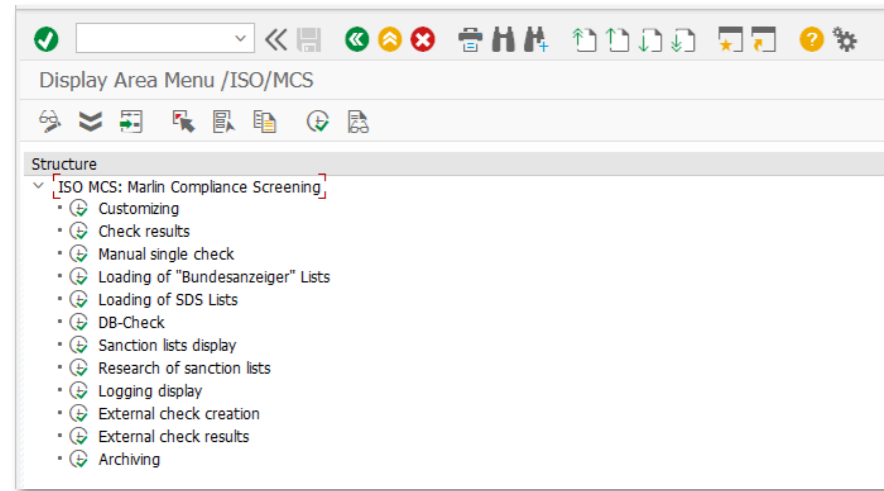

Architecture

Marlin Compliance Screening is programmed in ABAP and installed in the SAP system (ERP release ECC6, S/4HANA) via SAP transports. ISO uses a high performance algorithm for the screening technology.

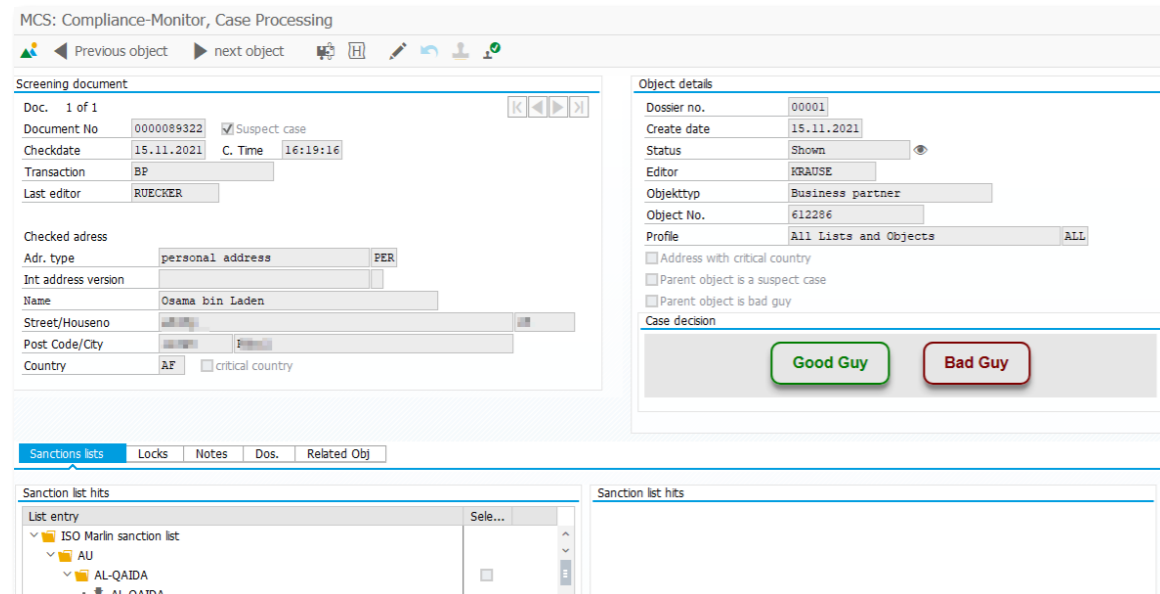

Improve Validation with Add-ons

The address can be checked and corrected by the ISO product Marlin Address Validation to improve the quality of the check. The improved address optimizes the verification compared to the checklists.

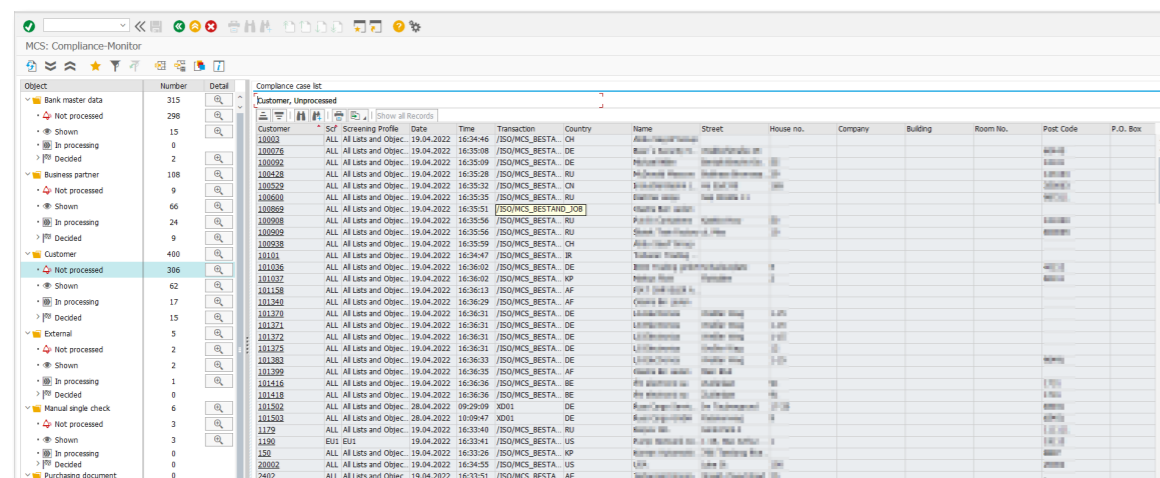

The Marlin Content add-on compares the master record to be checked with an international database. The user receives information on whether the business partner exists, whether it is the head office or a branch

MARLIN SUITE FOR SAP

- **Data Governance**
for customer, vendor, business partner, material master and other objects
- **Business Partner Identification**
Match input with an international corporate database
- **Data enrichment**
Update company name, address, tax number, marketing characteristics, parent company
- **Customer hierarchy** - view and create
- **Credit Check**
Connection to FCSM credit management system
- **Duplicate Check**
Material master dialog, fault-tolerant search
- **VAT-ID Check**
Dialog, inventory, FI, SD documents
- **Search technology**
Scarus Data Quality Server, thesaurus, transcription, business form recognition, conversion of measurement units
- **Duplicate Check for business partners**
Dialog, inventory, CSV, header duplicate detection
- **Copying of organizational views**
Company code, Purchasing organization, Sales organization
- **Address validation**
Standardization, correction, geodata
- **Sanctions List Check**
Dialog, inventory, transaction data
- **PEP Lists Check**
Dialog, inventory, transaction data

Sound advice and field-proven, robust products

ISO has created a holistic solution approach for data quality with the Marlin product suite. With over 400 SAP installations (ERP, CRM, IS, S/4HANA), we offer reliable project management and first-class expertise in the data quality and data governance environment. Depending on the requirements, we complement our spectrum by cooperating with other data quality experts who provide web services, content, or technologies.

ISO Professional Services GmbH

ADVANTAGES

- SAP Integrated Solution
- for S/4HANA, SAP ERP
- ISO provides own lists via web service
- Language independent screening technology
- Web service to connect to other systems (portal, SRM, CRM)
- Validation of CSV lists

– An ISO-Gruppe company –
ISO-Gruppe worldwide
Austria | Canada | Poland
